

Stretched oval

A smooth, stretched round boundary with no straight sides.

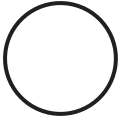

1. Look at the outline.

Trace its boundary with a finger. Color the inside any way you like.

Find the stretched ovals here. These examples are ellipses; a circle is a special ellipse.

2. Find four matching shapes.

They can be smaller, larger or turned. Color each match.

3. Make one your own.

Draw the shape below, or turn it into a picture. Any idea is welcome.
