

Long rectangle

Four square corners; these examples have two longer sides.

1. Look at the outline.

Trace its boundary with a finger. Color the inside any way you like.

A square is also a rectangle. In this activity, find the long rectangles.

2. Find four matching shapes.

They can be smaller, larger or turned. Color each match.

3. Make one your own.

Draw the shape below, or turn it into a picture. Any idea is welcome.
